The way the turkeys collect their feed is very different from the way that chickens do it. Turkeys are very easily spreading feed because they eat quickly and greedily. For this reason, it is very important to choose the feeder according to the type of farming and individual needs. Our company offers two types of universal feeders that can be used during the entire breeding cycle. In the rearing phase of the turkey, we assemble a small plate, while in the turkey fattening phase we propose large plate.

### Feeders with a small plate

Feeders with a small plate are designed for rearing turkey and turkey.
- for up to 60 birds,
- designed for birds from 1 day of life to 8 kg.

### Codaf feeders

Codaf feeders have 12 partitions
- non-collar feeders for rearing turkey and turkey hens serve up to 60 birds,
- feeders with a collar for turkey hens fattening, they serve up to 60 turkey hens,
- feeders with a collar designed for turkey fattening, they serve up to 50 turkeys.

### Feeders with a large plate

Feeders with a large plate are designed for turkey fattening.
- up to 50 turkeys and up to 60 turkey hens,
- intended for birds weighing from 8 to 22 kg.

### ADAVANTAGES:
- simple adjustment of the edges at the turkey chick rearing ensures easy access to feeder,
- easy to clean and maintain hygiene,
- feeders are particularly resistant to mechanical damage,
- a plate with a high rounded edge minimizes feed losses and prevents damage to breast muscles of birds,
- high quality materials used for the production of feeders guarantee their long life,
- the lid and arms are made of stainless steel,
- the bowl is available with a green bowl,
- it can be successfully used in geese and ducks breeding.
ADAVANTAGES:

- the diameter of the PVC water pipe is 2.2 x 2.2 cm,
- proper construction and installation of the watering system allows the birds to pass freely under the water lines,
- easy to clean,
- available in red.

Bell drinkers for rearing and fattening phase

ADAVANTAGES:

- made of high quality plastic, resistant to low and high temperatures and mechanical damage, it can be used for many seasons
- the assembly of drinkers is usually done by hanging them, but they can also be successfully put on the ground,
- the right valve automatically blocks or unblocks the water supply, which ensures the maintenance of a constant level of water in the bowls,
- ideally suited for turkey free breeding and breeding on the bedding,
- easy to clean, easy to assemble and use,
- proste w montażu i obsłudze,
- they have ballast, which can be filled with water or sand,
- available in red.

Cup-drinkers for birds rearing and fattening

Birds open the valve with clean water that fills the bowls by tricking the pendulum. Depending on the breeding period, we use respectively: a small bowl in the turkeys rearing phase and a large bowl in the fattening phase.

ADAVANTAGES:

- the construction of drinkers allows to maintain a higher water level, compared with other similar vessels,
- the oval shape of the bowl provides small birds with easy access to water,
- using a special collar, you can increase the diameter and capacity of the bowl for rearing, which will make it suitable for birds during the fattening phase,
- the correct amount of water is adapted to the age and weight of birds,
- provides the birds with constant and fresh water, making them healthier and less stressed,
- the construction of the drinking bowl enables the maintenance of dry bedding,
- the bottom of stainless steel stimulates the birds to drink water and prevents holes pecking,
