

## FEEDER FATTENING HOUSE

# FEEDER FATTENING HOUSE

## „MULTIMAT“ Auto-feeder

The "Multimat" tube feeder is designed to provide "mush" feed in pig farms equipped with automatic feeding systems. It also works perfectly in buildings with a manual feed hopper. Its operation consists in automatic fall of the feed from the tank to the trough. Dispensers are activated by the animals at the moment of feed intake, and the intensity of falling the feed is regulated by means of special levers. Each machine is equipped with an inclined cover with space to run two tubes, which gives the possibility of feeding two types of feed. The single machine has a trough, 2 teats and a charging hopper with a capacity of 160 l.

### MULTIMAT T- for pigs weighing 15-120 kg

a playpen equipped with the MULTIMAT T single feeder

### PRODUCT ADVANTAGES:

- supports from 32 to 45 animals,
- optimal selection of materials such as polyethylene and stainless steel, resistant to corrosion and aggressive environment prevailing in the pig house guarantee long-term functioning of Multimat,
- inclined cover of the tank protects the feed against impurities and makes it easier to control its quantity,
- without sharp edges, embossed and deepened trough is very hygienic, and at the same time limits the spread of feed by animals, increasing its use,
- stable frame construction enables the assembly of Multimat into a partition or setting it as a free-standing device,
- has large feet used to stably fix the device to the ground.

## AWST box feeding - for fattening pigs ( 15 – 120 kg )

The operation of the machine consists in the gravitational falling of the feed in a loose or granulated form from the tank to the trough. The housing of the trough is of a rectangular box shape with one inclined wall, forming a funnel, under which there is a feeding trough.

### PRODUCT ADVANTAGES:

- simple, smooth regulation of the feed fall with the knobs enables precise feeding, which makes it possible to adjust the amount of feed in the trough to the fattening pig age and phase,
- stable, solid construction ensures high durability,
- resistant to corrosion and aggressive environment inside the livestock building,
- easy to clean and maintain hygiene,
- box feeders are available in one-sided and double-sided versions,
- box feeders are made of polypropylene and stainless steel.
